## CONTACT

(806) 656 - 1087  
acanedo@wgu.edu  
Pittsburgh, PA

## SKILLS

- UI/UX Design
- Functional Prototyping & Wireframing
- Full-Stack Development
- Incident Response & Strategic Problems Solving
- Technical Project & Executive Stakeholder Management
- C# | Python | JavaScript | SQL | Bash/Shell

## EDUCATION

### BACHELOR OF SCIENCE, SOFTWARE ENGINEERING

Western Governors University  
2019 - 2025

### ASSOCIATE OF APPLIED SCIENCE, INTELLIGENCE OPERATIONS STUDIES

Cochise College  
2021-2022

## CERTIFICATIONS

COMPTIA A+ | NET+ | SEC + | PROJECT+  
AWS CERTIFIED CLOUD PRACTITIONER

# ADRIANA CANEDO

## SOFTWARE ENGINEER & UI/UX DESIGN ANALYST

Strategic Technologist with nearly 20 years of expertise across global SIGINT and Cyber Defense. Expert in transforming vast, unstructured data into streamlined operational strategies. Currently bridging the gap between intelligence analysis and scalable, cloud-native engineering through advanced studies at Carnegie Mellon University. Dedicated to functional design and high-utility systems architecture. Defined by a 'figure-it-out' mentality and the ability to rapidly master emerging technologies in high-pressure environments.

## EXPERIENCE

### PROJECT MANAGEMENT & STRATEGIC LEADERSHIP

2009 - Present

U.S. Department of Defense

- Managed data architecture and records for a 77-person multi-service team, ensuring 100% data integrity and organizational mission readiness.
- Optimized human capital during critical resource shortages, cross-training a five-person team to sustain a mission originally designed for 30 personnel.
- Maintained 100% accountability for high-value technical assets valued at over \$10M, achieving zero loss or mission degradation over multiple years of operation.
- Led and mentored diverse teams of up to 23 personnel, managing daily performance, career counseling, and advanced technical training.
- Built and managed high-level strategic partnerships across multi-service and multi-agency lines, including coordination with Congressional members and the CIA.

### AI & CLOUD-NATIVE ENGINEERING

2025 - Present

Artificial Intelligence Integration Center / Carnegie Mellon

- Developed the Aegis Scholar platform, a centralized discovery tool designed to streamline research workflows and improve data accessibility for researchers.
- Architected containerized backends using Python, FastAPI, and Docker, implementing Kubernetes to ensure high availability and automated scaling of services.
- Engineered automated data pipelines that prioritize utility and performance, moving away from "white noise" and focusing on actionable system metrics.
- Integrated Vector and Graph database architectures to manage highly interconnected data, enabling discovery capabilities that were previously impossible with legacy systems.

### CYBER DEFENSE & INCIDENT RESPONSE

2022 - Present

U.S. Department of Defense

- Orchestrated the response and reporting for over 6,500 security incidents across a global enterprise network, ensuring 100% network integrity.
- Hardened the attack surface for 750,000+ endpoints by managing the distribution and execution of hundreds of Tasking Orders for IP and domain blocks.
- Served as a Strategic Security Advisor to General Officers, developing technical assessments to inform the worldwide defensive posture.
- Directed daily operations for a Defensive Cyber Operations branch, overseeing mission readiness, personnel qualification, and threat intelligence integration.
- Managed the identification and resolution of emerging threat campaigns, ensuring the protection of classified and unclassified data systems.

### INTELLIGENCE OPERATIONS & DATA ANALYTICS

2009 - 2022

U.S. Department of Defense

- Engineered a national-level data processing workflow that increased efficiency by 96%, reducing critical hours-long manual tasks to just minutes.
- Architected and scaled three enterprise-level databases for tracking and visitor management; these solutions were adopted as the standard at the DIRNSA level.
- Delivered 76 high-impact intelligence products that directly enabled the neutralization of top-tier high-value targets (HVTs) on international watchlists.
- Served as a Lead Auditor for 30+ international missions, balancing complex operational requirements against 4th Amendment rights and international regulatory frameworks.
- Designed a local intelligence database with 1,500+ unique data points, significantly increasing the availability and searchability of regional threat data.
- Authored 110+ serialized intelligence products, providing real-time situational awareness to strategic decision-makers in high-priority areas of operation.
